

STF Committee:

I am resending the original review about what we hope the STF reserve funds might address if allocated to improving WiFi at Western. I have recently gained commitments from Facilities Management that they will approach this project as a business partner with IT. And a commitment from Academic Affairs that the university will strive to maintain all existing WiFi infrastructure.

From John Furman, Director of Facilities Management

I can commit to supporting the project, and as more information becomes available, work toward a viable operating budget model to maintain the resource.

From Provost Brent Carbajal:

I wish Academic Affairs were in the position to make some sort of a financial commitment on maintaining WiFi infrastructure, but we're not. What I think is safe to say, however, is that the University has to maintain WiFi infrastructure and has maintained what it has in the past. So, if it's a case of stating that maintenance of WiFi infrastructure is something the university knows is important and that it will have to find ways to do – we can say that.

I do think that we should make a decision about the use of the STF reserve funds at our meeting Thursday. I know this is a difficult decision placed before you with your limited knowledge of the campus WiFi infrastructure. However, I do believe that a significant investment in the campus WiFi with the available STF reserves would be an extremely important strategic investment in the future of Western Washington. WiFi has always been a commitment for STF funds so this is not outside the lines of normal use of the funds. I would leverage this commitment on behalf of the students as a rallying call for all to think in terms of their strategic impact on the future of Western Washington.

Greg Smith
Interim Vice Provost for Information Technology
Chief Information Officer
Western Washington University
